BABY & INFANT EAR PIERCING
BY THE VIPER PIT

PARENT AFTERCARE GUIDE

Freshly pierced ears.

Simple, careful aftercare.

Good healing is mostly about clean hands, gentle care and leaving the new piercings alone.

01

Clean hands first

Always wash and dry your hands before touching the ears or applying aftercare.

02

Use the supplied lotion

Use the included Studex aftercare lotion exactly as Chris explained at the appointment.

03

Keep them undisturbed

Avoid unnecessary touching, pulling or pressure. Do not twist or rotate the jewellery.

04

Keep everyday items clean

Take care with hair, hats, headphones, bedding and towels so they do not catch or irritate the ears.

05

Do not change them early

Leave the starter earrings in place until the piercings are fully healed and ready to be checked.

Keep this leaflet somewhere handy during healing.

Questions? Call 0161 270 6375

What is normal?

A little tenderness at first can be expected.

Healing is not always perfectly linear. The area may feel settled and then become mildly irritated after being knocked or caught. Return to gentle aftercare and avoid fiddling with the jewellery.

Please contact us if you are worried about:

- persistent or worsening swelling
- heat, discharge or increasing redness
- worsening pain or jewellery becoming embedded
- anything that simply does not look right to you

Their next earrings

Once the piercings are fully healed, contact us before changing the starter jewellery. We will autoclave a suitable pair of next earrings free of charge.
